Chromatography | ScienceDirect

There are different types of chromatography and one of them is paper chromatography. The entire procedure requires the use of a specialized paper, specifically, a cellulose filter paper that serves as a stationary phase where the separation of compounds happens. In other words, paper chromatography is a method that makes use of a paper sheet or strip as an adsorbent in the stationary phase through which a particular solution is allowed to pass.

What is Paper Chromatography - How does it work, procedure ...

Paper chromatography is an analytical method used to separate colored chemicals or substances. It is primarily used as a teaching tool, having been replaced by other chromatography methods, such as thin-layer chromatography. A paper chromatography variant, two-dimensional chromatography involves using two solvents and rotating the paper 90° in between.
