Environmental chemistry focuses on the presence and impact of chemicals in soil, surface water, and groundwater. Environmental chemists study how chemicals - usually contaminants - move through the environment. This is referred to as chemical "fate and transport". They also study the effects of these contaminants on ecosystems, animals, and human health.

The Environmental Chemistry emphasis provides students with tools to: (1) understand the processes governing chemical transformation in soil, water and air; (2) analyze for the key chemicals in the environment; and, (3) make meaningful predictions about the fates of these chemicals. This emphasis draws on subjects outside of a classical chemistry degree to include courses in atmospheric science, soil microbiology, environmental toxicology and mineralogy.
