BeginNew-Tight / Java®: A Beginner's Guide, Fifth Edition / Herb Schildt / 632-7 / Chapter 1. 22 Java: A Beginner's Guide. Java defines a full complement of relational operators that may be used in a conditional expression.

Chapter 1

This is a standard technique in designing a schema. When you want to say "in this element, B can occur arbitrary times, but C can occur only up to once", you write this as B*(C,B*)?.This, however, confuses JAXB, because it tries to bind the first B to its own property, then C to its own property, then the second B to its own property, and so we end up having a collision again.

JAXB Users Guide - Java EE

A java.awt.TextField is single-line text box for users to enter texts. (There is a multiple-line text box called TextArea .) Hitting the "ENTER" key on a TextField object fires an ActionEvent .
